Why Statamic ?

We were looking for a Laravel-powered CMS

Source : <https://github.com/chiraggude/awesome-laravel#content-management-systems>

- OctoberCMS
- PyroCMS
- Lavalite
- Bootstrap CMS
- TypiCMS
- Asgard CMS
- Microweber
- Coaster CMS
- **Statamic**
- Quarx
- WebEd CMS
- Borgert CMS
- WebEd CMS
- PJ Blog

The reasons

"Statamic actually works the same way we think. It's a perfect pairing of usability and great developer experience."

MATT STAUFFER, TIGHTEN CO.

"We couldn't do it without Statamic."

Paying Solution

Version Control **Everything.**
Yes, even your content.

Only Official Documentation ? No.

The features

Built on Laravel

Extend Statamic with the full power of Laravel, or even integrate Statamic into your own Laravel projects. Win/win.

Super Fast Cache Features

Statamic can cache static pages and pass off routing to Apache or Nginx through reverse proxying.

Version Control Everything

Everything, from content to config, can be version controlled. Hello there, peace of mind. How've you been?

Image Manipulation

Manipulate your images on the fly with more than query strings. Resize, crop, blur, sharpen, pixelate, and more.

Command Line Tools

Generate theme files, addons, clear caches, or get your daily dose of Chuck Norris jokes like it's 2004 again.

To CP or not CP?

Everything can be accomplished with or without the use of the Control Panel. Don't like clicking? We got your back.

Add-ons : Luckey & Spock Example

```
commands:  
- "git add {{ full_path }}"  
- "git commit -m '{{ url }} updated by {{ committer:username }}'"  
- "git push"
```

Spock Basic Usage

And many open or private others add-ons...

**Ok, that's nice.
But do I recommend Statamic ?**

Well...

Yes

- Laravel-powered (and Vuejs)
- Everything is version-controlled
- Very nice cache features
- Good community
- Pretty Control Panel (for marketing teams)
- Add-ons allow extreme personalization
- Localization available
- Free when trying in localhost
- Easy upgrade

No

- Localization sucks (Everyone's not english)
- Not an open-source project
- Many issues not corrected even if solution is available in issue's discussion
- Not enough mature solution

Thank you.
